STEP-03: Update the App.java with new palindrome code

```
package com.example;

public class App {

    public static void main(String[] args) {

        String str = "madam";
```

```
String rev = "";
        for (int i = str.length() - 1; i >= 0; i--) {
            rev = rev + str.charAt(i);
        }
        if (str.equals(rev)) {
            System.out.println(str + " is a Palindrome");
        } else {
            System.out.println(str + " is not a Palindrome");
        }
    }
}
```

STEP-04: Again, build the image

```
C:\Users\narut\docker-maven2\docker-demo>docker run docker-demo:1.0-SNAPSHOT
madam is a Palindrome

C:\Users\narut\docker-maven2\docker-demo>
```

STEP-05: Run the container output will be there
